Home Security Checklist

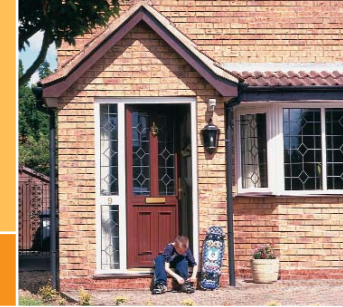

Your Guide to choosing a secure entrance door

- Police Approved
- Secured By Design
- Rigorously Tested

SAFEWARE 

Our Standard Door Specification

Security is one of the most important considerations when you're choosing a new entrance door for your home. With a Safeware-specification door from Profile 22, you're in safe hands. The Safeware high security locking system has been designed specifically for our doors. It has been independently tested by the British Standards Institute and Secured By Design, a Police-led security initiative. In fact we're so confident that it will resist intruders that we'll give you up to £500 if you suffer a burglary as a result of our product failing*.

This detailed door illustration explains the Safeware features that will keep your home secure.

For peace of mind, consult the checklist on the back page.

Hinge bolts – for added security.

Adjustable, secure and robust single or three directional hinges.

Reinforced profiles for stability and security.

Choice of threshold options including low threshold, which conforms to current Building Regulations Part M, concerning access.

Safeware 3+ with shootbolts. Fitted at the top and/or bottom of the door.

Safeware 7 locks incorporating 4 adjustable stainless steel rollers for improved sealing.

Safeware 3+ and Safeware 7 locks incorporating 3 die-cast hooks with in-built reverse operation anti-lift, and 25mm throw for added security.

Latchbolt holds back preventing lock-out (lever/pad handle only)

Centre hook for added security.

High security 6-pin profile cylinder with anti-drill and anti-pick.

Fully adjustable stainless steel keepsets. Safeware 7 locks incorporating a one piece keepset for added security.

Secured By Design Explained

Secured By Design is an initiative managed by the Police to help homeowners choose products that meet high standards in security and crime prevention.

Our new Safeware door lock range has been accredited by Secured By Design. It has been subjected to rigorous testing procedures to assess resistance to forced entry and durability. When you see the Secured By Design hallmark you can be confident you are choosing products that are designed to create a safer and more secure environment in your home.

What are PAS023 and PAS024?

Like Secured By Design, the PAS023 and PAS024 quality marks demonstrate that a product has met certain security standards. These Kitemarks are developed and awarded by the British Standards Institute to PVC-U windows and doors that successfully pass a series of security tests that simulate forces applied during an attempted break-in or boisterous use and cycle tests to establish performance over an extended period.

Unlike Secured By Design, PAS023 and PAS024 are tests of the complete window or door and take into account other security features, such as glazing security.

Profile 22 windows and doors fitted with Safeware products have been awarded both of these Kitemarks.
